6. Remarks and Other Relevant Information:

We have a need to go from surface water to ground water to meet Washington State Department of Health (WDOH) drinking water standards and reduce our treatment costs. The diversion system needs to be accessible by a water purveyor that can provide delivery of high quality water that meets WDOH standards. Alpine Water District has this ability to provide safe, drinking water at our Ranger Station Complex.

The Forest Service Administrative Complex that the water system serves is comprised of an office building of approximately 7000 square feet, 6 houses, 5 trailers, and two bunkhouses. There is also a six person campground that hosts volunteer groups in the summer, a fire warehouse, an automotive/wood shop and a horse corral. The majority of the houses, bunkhouses and trailers are rented to Forest Service seasonal employees in the summer and to New Stevens LLC employees in the winter. All of these facilities are connected to the same potable water system. The water system serving the Complex has a 50,000 gallon reservoir and an 8 inch distribution line that also provides fire flow capacity to 4 fire hydrants. In addition, the Complex may host fire suppression crews that can exceed 20 persons camping in the campground or on site. The Complex serves more than 25 persons for more than 60 days per year.

Water system operability and diversions were confirmed in the 1995 Report of "Findings of Fact and Decision IN THE MATTER OF APPLICATION FOR CHANGE FILED BY THE WENATCHEE VALLEY YMCA TO CHANGE THE PLACE OF USE AND ADD A POINT OF DIVERSION TO SURFACE WATER CERTIFICATE NO. 8761" signed 12/29/95 by Darlene Frye, WDOE Section Manager.

The change in diversion would increase the surface flow in the stream from which the water is currently being diverted.

Per Alpine Water District, the well at Lake Wenatchee State Parks recovers at approximately 100 gpm.
